INDEX.

Acid, carbonic, on solid, 184.
Adie, Mr John, his description of a new anemometer, 309.
Algalmatolite, analysis of, 406.
Allan, Mr, his meteorological journal kept at the Elgin Institution for the year 1836, 371.
Anemometer, description of a new, 309.
Animal kingdom, on the unity of structure in the, 116, 345.
Animals, infusory, of the springs of Carlsbad, 199.
Arteries, on the mechanism of the motion or beat of, 399.
Arts, Proceedings of the Society for the Encouragement of the Useful, in Scotland, 206.

Barometer, rapid fall of the, during the late violent gale at Edinburgh on Monday 15th February 1837, 386.
Barometers, researches on living, 190.
Barry, Dr M., on the unity of structure in the animal kingdom, 116, 345.
Beer, mode of preventing, from becoming acid, 196.
Berzelius, Professor Jacob, on meteoric stones, 1.
Bitumens, on the composition of, 79.
Bones, fossil, on the, of the tertiary formation of Simorre, &c. in the department of Gers, 403.
Boué, Dr, his remarks on the mode of travelling in Turkey, 142. His observations on the geography and geology of Northern and Central Turkey, 47, 253.
Boussingault, M., on the composition of bitumens, 77.

Canis, on an African species of the genus, 397.
Cerigo, on the natural history and statistics of, 62.
Cetacea, on the specific characters of the larger, 198.
Charlesworth, Edward, Esq., on some fallacies involved in the results relating to the comparative age of tertiary deposits, 110.
Charpentier, F. De, his conjectures regarding the great revolutions which have so changed the surface of Switzerland, &c. 27.
Christison, Dr, on the composition and properties of certain concrete juices resembling gamboge, 376.
Circle, description of a new pocket, 226.
Connell, A. Esq., his analysis of fossil scales from the old red sandstone, Clashbennie, Perthshire, 281.
Crustacea, on the geographic distribution of the, 397.
Currents, electric, on the, observed in some metalliferous veins, 270.

Decapodes, on the development of the, 364.
Dujardin, M. F., his microscopic researches on the structure of the teeth, 203.
Dwarf, the Illyrian, 201.

Edwards, M. H. Milne, his observations upon the fossil polypi of the genus Eschara (*Millepora*, Lin.), 171.

Ehrenberg, Professor, his researches regarding fossil infusoria, 84, 183—on masses of polyparia without animals, 355.
Egypt, on the geology of, &c. 40.
Expression, new, for determining the various circumstances connected with the dip, &c. of stratified rocks, 405.

Firmas, M. d'Hombres, his researches on living barometers, 190.
Flourens, M. on the mechanism of the motion or beat of arteries, 399.
Flesh, horse, use of, as an article of food in Paris, 199.
Flints, on the manufacture of gun, 36.
Fluid, seminal, on the organized bodies found in the, 330.
Forbes, Professor, his observations on terrestrial magnetism, made in different parts of Europe, 378—on the result of experiments on the weight, &c. of 800 individuals, 381.
Fox, Mr, result of his experiments on the production of artificial crystals by voltaic action, 402.
Frere, Right Hon. J. H., on a natural phenomenon lately discovered in the neighbourhood of the Pietà, Malta, 23.

Galbraith, Mr, on a new pocket box-circle, 226—on the erroneous geographical position of many points in the Frith of Forth, 248.
Geoffroy, biographical notice of the mulatto M. Lislet, 70.
Geography, botanical contributions to the, of Southern Europe, 304.
Goniometer, account of an improvement in the construction of Wollaston's, 213.
Goring, C. R., Esq. and Andrew Pritchard, Esq. notice of their work, entitled Micographia, 205.
Graham, Dr, his description of several new or rare plants which have lately flowered in the neighbourhood of Edinburgh, 373.
Greenland, on the temperature of, 386.
Guthrie, Mr H , his notice of a new reflecting microscope, 379.

Halo, Lunar, 382.
Henwood, W. J., Esq. on the phenomena of metalliferous veins, 112—on the electric currents observed in some metalliferous veins, 270.
Hoff, K. E. A. Von, on the origin of meteoric stones, 285.
Humboldt, Baron de, report upon a letter addressed by, to his Royal Highness the President of the Royal Society, London, 316.

Iceland, on the mineral springs of, 90, 220.
Infusoria, observations regarding fossil, 84, 183.
Instruments, meteorological, account of some, 313.

Jameson, R., Esq. on the natural statistics of the island of Cerigo, and its dependencies, 62.
Jamesonite, analysis of, from Estremadura, 403.
Juices, concrete, notice regarding the composition and properties of certain, resembling gamboge, 376.

Kinfauns meteorological table for 1836, 370.

Land, clearing, questions respecting the effects of, 387.

XUM

Light and darkness, influence of, on the human body, 394.
Link, Professor, his contributions to the botanical geography of the south of Europe, 304.
Luminous appearance, notice of a, at sea, off the Shetland Islands, 193.

Macritchie, Rev. W., and Mr George, their meteorological table, shewing the temperature and pressure at Clunie Manse, Perthshire, 367.
Magnetism, terrestrial, report on, 316—observations on, made in different parts of Europe, 378.
Matteucci, M., his experiments upon the Torpedo, 193.
Meteorology, connection between, and vegetation, 383.
Microscope, notice respecting a new reflecting, 379.
Milk, asses', on the chemical composition of, 79.
Milne, Captain, on the magnetic variation near Edinburgh, and in Berwickshire, 175.
Mineralogy, notice of Levy's work on, 204.
Mitchell, Dr James, on the manufacture of gun-flints, 36.
Monkey, fossil, on the recent discovery of a jaw of a, 403.

Nash, D. W., Esq., on the geology of Egypt and the valley of Cossier, 40.
Nidda C. Krug, Von, on the mineral springs of Iceland, 90, 220.
Nights, tropical, 192.
Nitrogen, on the proportions of, in different varieties of wheat, 393.

Oil, on tea, 380.

Patents, list of, granted in Scotland from 20th September to 17th December 1836, 211; from 17th December 1836 to 14th March 1837, 407.
Paterson, John, Esq., on an arrangement of the planets and satellites, according to their distances and masses, 375.
Payen, M., on the proportion of nitrogen in different varieties of wheat, 393.
Peligot, M. E., on the chemical composition of asses' milk, 79.
Peluze and Liebig, Messrs, on the bouquet of wines, 392.
Plagionite, analysis of, 406.
Plants, description of several new or rare, which lately flowered in the neighbourhood of Edinburgh, 373.
Plants and animals, on the distinctive characters between, 396.
Platinum, note on the manufacture of, 197.
Polyparia, on masses of, without animals, 395.
Ponton, Mungo, Esq., on the condition of the earth, as it is first described in the Mosaic account of the creation, 380.

Radiation, solar, 382.
Raffetot, M. le Compte de, his table of heights, ascertained barometrically, in the department of the Hautes-Pyrenees, 177.
Retzius, M., on the structure of the teeth, 202.
Rathke, H., on the development of the decapodes, 364.

Sang, Edward, Esq. his account of an improvement in the construction of Wollaston's goniometer, 213.

Sang, Mr John, on a systematic method of measuring surface and solidity, 231.
Saurian, fossil, in the lias limestone of Skye, 198.
Scales, fossil, analysis of, 281.
Scandinavia, climate of, 384.
Schaffgotsch, Count F., his analysis of Jamesonite from Estremadura, 403.
Sea, red coloured, 386.
Silver, lead, and copper, reduction of, 401.
Smith, James, Esq., on the indication of changes in the relative levels of the sea and land, 377.
Society, Royal, of Edinburgh, proceedings of, 375.
Sommerville, Mrs, her experiments concerning the transmission of the chemical rays of the solar spectrum through different media, 180.
Space, temperature of, 189.
Stars, observations on the shooting, of the year 1695, 188—of the 11th and 12th November 1833, 189.
Steatite, analysis of, 406.
Storms, hail, observations made on the occasion of two, which occurred at Toulouse and Touzac, 389.
Stones, meteoric, observations on, 1—remarks on the origin of, 285.
Switzerland, on the great revolutions which have so changed the surface of, 27.

Tables, meteorological, kept at Clunie Manse, Perthshire, 367—Kinfauns, 370—Elgin Institution, 371—Whitehaven, 372.
Taurus, on the ancient temperature of Mount, 189.
Teeth, researches on the structure of the, 202, 203.
Thermometer, on a new, which will indicate mean temperatures, 186.
Thomson, Dr R. D., on tea-oil, 380.
Torpedo, experiments on the, 193.
Treviranus, M., on the organized bodies found in the seminal fluid of animals, &c. 330.
Turkey, on the geography and geology of northern and central, 47, 253. On the mode of travelling in, 142.

Vanbeneden, M., on the specific characters of the larger cetacea, 198.
Vegetable kingdom, on the relations of colour and smell in the more important families of the, 7.
Veins, on the phenomena of metalliferous, 152—on the electric currents observed in some metalliferous, 270.

Whitehaven, state of the barometer and thermometer, &c. in, for the year 1836, 372.
Wines, on the bouquet of, 392.

Yarrell, William, Esq., notice of his work on British fishes, 205.

Zinc-blende, radiated, analysis of, 406.

XUM

35-019

PRINTED BY NEILL & COMPANY, OLD FISHMARKET.

CONTENTS.

Art. I. On Meteoric Stones. By Professor Jacob Berzelius, ... Page 1

II. On the Relations of Colour and Smell in the more important Families of the Vegetable Kingdom, 7

III. Extract of a Letter from the Right Hon. J. H. Frere, written from Malta to Dr Davy, on the subject of a Natural Phenomenon lately discovered in the neighbourhood of the Pietà. Communicated by Dr Davy, . . 23

IV. Some Conjectures regarding the Great Revolutions which have so changed the Surface of Switzerland, and particularly that of the Canton of Vaud, as to give rise to its present Aspect. By F. de Charpentier, . 27

V. On the Manufacture of Gun-Flints. By James Mitchell, LL.D.. F. G. S. Communicated by the Author, ... 36

VI. On the Geology of Egypt and the Valley of Cosseir. By D. W. Nash, Esq. A.L.S., Assistant-Surgeon, Bengal Army. Communicated by the Author, ... 40

VII. Some Observations on the Geography and Geology of Northern and Central Turkey. By Dr A. Boue'. Communicated by the Author in a letter to the Editor, . . . 47

VIII. Notes on the Natural History and Statistics of the Island of Cerigo and its dependencies. By Robert Jameson, Esq. Assistant Surgeon, 10th

Regiment of Foot, Corfu. (Continued from last Number, page 279. of vol. xxi.), . . 62

IX. Biographical Notice of the Mulatto M. Lislet-Geoffroy, Correspondent of the Academy of Sciences for the Section of Geography and Navigation, ... 70

X. On the Composition of Bitumens. By M. Boussingault, ... 77

XI. Memoir on the Chemical Composition of Asses' Milk. By M. E. Peligot, ... 79

XII. Farther preliminary Notices regarding Fossil Infusoria. By Professor C. G. Ehrenberg. (Communicated to the Royal Berlin Academy of Sciences), ... 84

XIII. On the Mineral Springs of Iceland. By C. Krug von Nidda, ... 90

XIV. On some Fallacies involved in the Results relating to the Comparative Age of Tertiary Deposits, obtained from the Application of the Test recently introduced by Mr Lyell and M. Deshayes. By Edward Charlesworth, Esq., F. G. S. 110

XV. On the Unity of Structure in the Animal Kingdom. By Martin Barry, M. D., F. R. S. E., M.W.S., late President of the Royal Medical Society of Edinburgh. Communicated by the Author, ... 116

XVI. Some Remarks on the Mode of Travelling in Turkey. By Dr A. Boué. Communicated by the Author, ... 142

XVII. A Lecture on the Phenomena of Metalliferous Veins; delivered at the Penzance Institution, on Tuesday the 10th of November 1836. By W. J. Henwood, F. G. S. London and Paris, Assay Master of Tin in H. M. Duchy of Cornwall, ... 152

XVIII. Observations upon the Fossil Polypi of the Genus Eschara, (*Millepora*, Lin.) By M. H. Milne Edwards, ... 171

XIX. The Magnetic Variation near Edinburgh, and

in Berwickshire. By Captain MILNE, R. N., F.R.S.E. (Communicated by the Author), . 175

XX. Table of Heights ascertained barometrically in the Department of the Hautes-Pyrénées. By M. LE COMTE DE RAFFETOT. Communicated by Professor FORBES in a Letter to the Editor, . 177

XXI. Extract of a Letter from Mrs SOMERVILLE to M. ARAGO, detailing some Experiments concerning the Transmission of the Chemical Rays of the Solar Spectrum through different Media, 180

XXII. Observations regarding Fossil Infusoria, communicated to the Royal Academy of Sciences of Berlin, by Professor EHRENBERG, on the 27th and 30th June 1836, ... 183

XXIII. SCIENTIFIC INTELLIGENCE, . . . 186

METEOROLOGY.

1. Upon a new Thermometer, which will indicate Mean Temperatures. In a Letter from M. JULES JÜRGENSEN to M. ARAGO, ... 186
2. Extract of a Letter from M. ——— to M. ARAGO, upon the Shooting Stars of the year 1695, . 188
3. Shooting Stars on the Night of the 11th–12th November 1833, in a Letter from M. GAIMARD to M. DE FREYCINET, ... 189
4. Temperature of Space, ... 189
5. The Ancient Temperature on Mount Taurus, . 189
6. Researches on Living Barometers, by M. D'HOMBRES FIRMAS, ... 190
7. Luminous Appearance at Sea off the Shetland Isles, 191
8. Tropical Nights. 192

ANIMAL ELECTRICITY.

9. Experiments of M. MATTEUCCI upon the Torpedo, 193

CHEMISTRY.

10. On solid Carbonic Acid, ... 194
11. Mode of preventing Beer from becoming acid, . 196
12. Note on the Manufacture of Platinum, by M. PELOUZE, ... 197

ZOOLOGY.

13. On the Specific Characters of the larger Cetacea, as deduced from the Conformation of the Bones of the Ear. By M. VANBENEDEN, . . . 198
14. Fossil Saurian in the Lias of the Isle of Skye, . 198
15. Infusory Animals of the Springs of Carlsbad, . 199

ANTHROPOLOGY.

16. Use of Horse Flesh as an article of Food in Paris, 199
17. The Illyrian Dwarf, ... 201

ANATOMY AND PHYSIOLOGY.

18. Researches on the Structure of the Teeth. Extract of a Letter from M. RETZIUS to M. FLOURENS, 202
19. Miscroscopic Researches on the Structure of the Teeth. By M. F. DUJARDIN, . . . 203

XXIV. New Publications, ... 204

1. LEVY's Work on Mineralogy, . . . 204
2. Micographia: containing Practical Essays on Reflecting Solar Oxy-Hydrogen Gas Microscopes, Micrometers, Eye-Pieces, &c. By C. R. GORING and ANDREW PRITCHARD, Esqrs. 1 vol. 8vo, pp. 231. London, Whittaker and Company, . . 205
3. History of British Fishes. By WILLIAM YARRELL, Esq. Vice-President of the Zoological Society of London, &c. &c. Illustrated by nearly 400 Woodcuts. 2 vols. 8vo. John van Voorst, London, . 205

XXV. Proceedings of the Society for the Encouragement of the Useful Arts in Scotland, . . 206

XXVI. List of Patents granted in Scotland from 20th September to 17th December 1836, . . 211

CONTENTS.

ART. I. Account of an Improvement in the Construction of Wollaston's Goniometer. By EDWARD SANG, Esq., F. R. S. E., Vice-Pres. Soc. Arts, Teacher of Mathematics, &c. Edinburgh. Communicated by the Society of Arts. . . Page 213

II. On the Mineral Springs of Iceland. By C. KRUG-VON NIDDA. (Concluded from p. 110), 220

III. A New Pocket-Box Circle. By WILLIAM GALBRAITH, Esq., M. A., Teacher of Mathematics, Edinburgh, M. S. A. Communicated by the Society of Arts, . . . 226

IV. On a Systematic Method of Measuring Surface and Solidity. By Mr JOHN SANG, Land-Surveyor, Kirkaldy. Communicated by the Society of Arts, ... 231

V. On the Erroneous Geographical Position of many Points in the Frith of Clyde. By WILLIAM GALBRAITH, Esq., M. A., Teacher of Mathematics, Edinburgh, M. S. A. Communicated by the Author, ... 248

VI. On the Geography and Geology of Northern and Central Turkey. Part II. Geology. By Dr A. BOUE. (Continued from last Number), . 253

VII. On the Electric Currents observed in some Metalliferous Veins. By W. J. HENWOOD, Esq., F. G. S., London and Paris, Hon. M. Y. P. S., Assay Master of Tin in H. M. Duchy of Cornwall. Communicated by the Author, . 270

VIII. Analysis of Fossil Scales from the Old Red Sand-

stone, Clashbennie, Perthshire. By A. Connell, Esq., F. R. S. E. Communicated by the Author, ... 281

IX. Remarks on the Origin of Meteoric Stones, and more especially on the views entertained on the subject by Berzelius. By K. E. A. Von Hoff, 285

X. Contributions to the Botanical Geography of Southern Europe. By Professor Link, . 304

XI. Description of a new Anemometer, by which the most minute changes in the force or velocity of the Wind or current of Air may be measured. Invented and constructed by Mr R. Adie, Optician, Liverpool; read and described to the Society of Arts for Scotland, by Mr John Adie, 25th May 1836. Communicated by the Society of Arts, ... 309

XII. Account of some Meteorological Instruments viz. 1. Register Anemoscope. 2. Register Barometer. 3. Register Thermometer. (With a Plate), ... 313

XIII. Report upon a Letter addressed by M. le Baron de Humboldt to His Royal Highness the President of the Royal Society, and communicated by His Royal Highness to the Council, . 316

XIV. On the Organized Bodies found in the Seminal Fluid of Animals, and their analogy to the Pollen of Plants. By G. R. Treviranus, . 320

XV. Further Observations on the Unity of Structure in the Animal Kingdom, and on Congenital Anomalies, including "Hermaphrodites;" with some Remarks on Embryology, as facilitating Animal Nomenclature, Classification, and the study of Comparative Anatomy. By Martin Barry, M. D., F. R. S. E., M. W. S. Communicated by the Author, . . 345

XVI. On the Development of the Decapodes. By H. Rathke. Communicated in a letter to Prof. Muller, ... 364

XVII. Meteorological Tables, shewing the Temperature

and Pressure at Clunie Manse, Perthshire, from the Year 1833 to 1836, inclusive. By the Rev. William Macritchie, and Mr George Macritchie, ... 367

XVIII. Kinfauns Meteorological Table for 1836, . 370

XIX. Abstract of a Meteorological Journal for the Year 1836, kept at the Elgin Institution. By Mr Allan, Master, . . . 371

XX. State of the Barometer, Thermometer, &c. in Whitehaven for the Year 1836, . . 372

XXI. Description of several New or Rare Plants which have lately Flowered in the Neighbourhood of Edinburgh, chiefly in the Royal Botanic Garden. By Dr Graham, Prof. of Botany, 373

XXII. Proceedings of the Royal Society of Edinburgh, 375

1. On the Arrangement of the Planets and Satellites, according to their Distances and Masses. By John Paterson, Esq. 2. Notice regarding the composition and properties of certain Concrete Juices resembling Gamboge. By Professor Christison. 3. Further Account of Indication of Changes in the relative Levels of the Sea and Land. By James Smith, Esq. of Jordanhill. 4. Observations on Terrestrial Magnetism made in different parts of Europe, especially with a reference to the Influence of Heights. By Professor Forbes. 5. Notice respecting a New Reflecting Microscope. By Mr Guthrie. 6. On Tea Oil. By Robert D. Thomson, M. D. 7. On Aplanatic Telescopes. By A. Blair, Esq. 8. On the Condition of the Earth, as it is first described in the Mosaic Account of the Creation. By Mungo Ponton, Esq. 9. On the result of Experiments on the Weight, Height, and Strength of above 800 individuals. By Professor Forbes. 10. Description of a single Achromatic Eye-glass. By Edward Sang, Esq.

XXIII. Scientific Intelligence, . . 382

METEOROLOGY.

1. Solar Radiation, ... 382
2. Lunar Halo, ... 382
3. Connection between Meteorology and Vegetation, 383
4. Climate of Scandinavia, ... 384
5. On the Temperature of Greenland, . . 385

6. Rapid Fall of the Barometer during the late violent gale on Monday the 19th February 1837 at Edinburgh, ... 386
7. Red-coloured Sea, ... 386
8. Questions respecting the Effects of Clearing Land. A Letter addressed by the French Minister of Finance to the Secretary of the Academie des Sciences in Paris, ... 387
9. Observations made on the occasion of two Hail-Storms which occurred at Toulouse and Jouzac, 389
10. Researches made on the Bouquet of Wines, by Messrs LIEBIG and PELUZE, . . 392
